

Recall: ++ for Variables

Recall: ++ for Variables

`++int_var`

```
int& pre_incr (int& a)
{
    a = a + 1;
    return a;
}
```

Recall: ++ for Variables

`++int_var`

```
int& pre_incr (int& a)
{
    a = a + 1;
    return a;
}
```

Increment value of a.
Then return **new** value as **l-value**.

Recall: ++ for Variables

`++int_var`

```
int& pre_incr (int& a)
{
    a = a + 1;
    return a;
}
```

Increment value of a.
Then return **new** value as l-value.

`int_var++`

```
int post_incr (int& a)
{
    int value = a;
    a = a + 1;
    return value;
}
```

Recall: ++ for Variables

`++int_var`

```
int& pre_incr (int& a)
{
    a = a + 1;
    return a;
}
```

Increment value of a.
Then return **new** value as **l-value**.

`int_var++`

```
int post_incr (int& a)
{
    int value = a;
    a = a + 1;
    return value;
}
```

Increment value of a.
Then return **old** value as **r-value**.

Recall: ++ for Variables

`++int_var`

```
int& pre_incr (int& a)
{
    a = a + 1;
    return a;
}
```

Increment value of a.
Then return **new** value as **l-value**.

`int_var++`

```
int post_incr (int& a)
{
    int value = a;
    a = a + 1;
    return value;
}
```

Increment value of a.
Then return **old** value as **r-value**.

++ for Pointers

++ for Pointers

- Same idea...

++ for Pointers

- Same idea...
- ...but: value of pointer is an **address**.

++ for Pointers

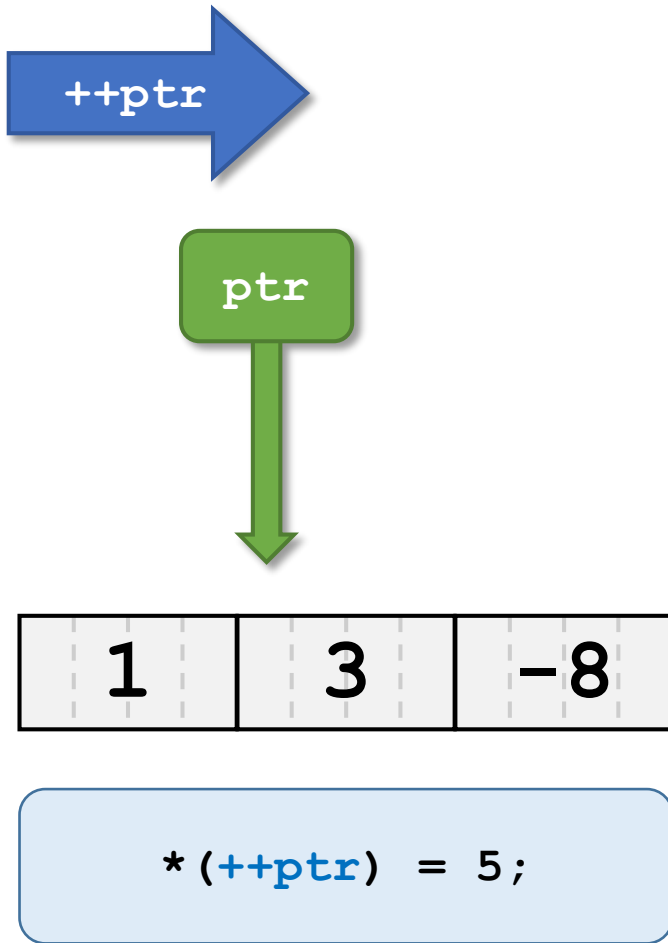

- Same idea...
- ...but: value of pointer is an **address**.
 - Shift pointer to **next object**.
